                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TITLE
```

```
Sci. (1996) 64:809-814. Poly(A) RNA was purified, a cDNA library was made, and 1 million primary lambda CDNA clones were in vivo excised to give a population of pBluescript SK(-) phagemids. All steps to this point were performed in the TJ Close lab at the University of California, Riverside (Fenton). Phagemids were plated, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an ABI3530 at the Arizona Genomics Institute, University of Arizona (Collura, Feuerbacher, Kim, Kudrna, Wing, Yu). Chromatogram files were transmitted to UC Riverside (by Yu), then processed at UC Riverside (by Wanamaker) using the HarvEST pipeline (http://harvest.ucr.edu) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were deposited to GenBank."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BQ722991

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; plant material and RNA prepared at Texas A & M University;
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /clome_lib="Callus culture/cell suspension"
/note="Vector: pMRI8S-F13; Site_1: Xho1; Site_2: Xho1; Th
library was prepared from a mixture of polyA+ RNA from
callus culture tissue and cells in suspension culture.
Double-stranded cDNA was cloned unidirectionally into
different DraII sites of the pMRI8S-F13 vector (5-prime
DraII site is CACTGTGTG, 3-prime DraIII site is
CACCATGTGT, Xho1 excises the cDNA insert."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       149 ATAGCAATCAGCCGAAACTCAAATGAATCCGGTCCCGGAGGAGGAGCCTGTGCTGGCCCGGGG 208

                                                                                              Sequences have been trimmed to exclude PolyA, vector and regions below Phrea quality 16. The threshold for highest quality sequence is 20. Three-prime sequences, which are obtained with PolyTMix or 77 sequencing primer, are presented as the reverse complement.
                                                                                                                                                                                                                                                                                                                                                                                     /clone lib="Dark Grown 1 (DG1)"
/note="Organ: 5-day-old dark-grown seedlings; Vector:
Inabda Zap; Site_1: XhoI; Site_2: EcoRI; The library was
made from poly-A RNA in the cloning vector lambda ZAP II.
Clones to be sequenced were prepared by mass excision."

/note="Organ: Pollen; Vector: pME18S-F13; Site 1: Xho1; Site 2: Xho1; The library was prepared from poly4+ RNA from pollen at the late vacuolated-vacuolated stage of development. Pollen was harvested from greenhouse-grown panicles of sorghum line BTx623. Panicles were removed from the flag leaf prior to emergence, when no detectable amylase is present in pollen of male-fertile lines. This stage represents pollen collected from anthers about 8-14 days prior to anthesis. Double-stranded cDNA was cloned unidirectionally into different Drall sites of the pME18S-F13 vector (5-prime Drall site is CACTGTGTG,

/note="Organ: immature ears; Site_1: Xba I; Site_2: Xba I;
The vector was digested with Xbal and one nucleotide was added by fill in in the recessive 3' end. The genomic DNA was nebulized, end repaired, adaptor ligated and size.
fractionated using sephadex. The resulting fragments were between 0.8 and 3 kb and were cloned into the vector (.x/y reads in M13mpl9: .b/g reads in pUC19). The same ligation was transformed into DH5a."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1, Application US/07862588B
Patent No. 5916796
GENERAL INFORMATION:
APPLICANT: Jobergensen, Per Linaa
APPLICANT: Gorgensen, Martin
APPLICANT: Hansen, Christian
TITLE OF INVENTION: An Enzyme Exhibiting Cellulase Activity
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSEE: No. 59167960 No. 5916796disk of No. 5916796th America, Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24 GlyLeuGlnLeuValAsnThrGlySerSerValAspLeuSerThrValThrValArg 43
